Ko'ragh

E' protetto da una Barriera Nullificatrice che assorbe tutti i danni magici subiti. Quando la barriera scompare, il boss attiva una runa per ricaricarla. Durante la ricarica, un personaggio può assorbire l'energia della runa e ricevere una propria Barriera Nullificatrice.
Durante lo scontro, dalla runa fuoriesce una quantità crescente di globi Energia Traboccante. Questi globi volano verso il basso, esplodendo quando toccano terra.
I personaggi che hanno una Barriera Nullificatrice possono intercettare e assorbire i danni di Energia Traboccante, per mitigare i danni subiti da tutto il gruppo d'istanza e impedire che siano letali.
Non appena lo scudo è rotto , il boss andrà al centro della stanza e inizia a ricaricarlo. A quel punto si può fare danno al boss. Mentre è attiva la runa della Nullificazione iL boss evoca 3 ANOMALIE INSTABILI ogni 8 secondi. (E' preferibile che queste anomalie vengano prese dall'off-tank). Queste anomalie instabili esplodono quando muoiono (DESTABILIZZAZIONE) causando 40.000 danni da arcano a tutti i personaggi.
Un dps ranged deve mettersi sul raggio di cast(ENERGIA CAUSTICA) quando il boss va al centro della stanza per riuscire ad andare nella runa con Ko'ragh, assorbendone una porzione di energia. L'energia infligge 45.000 danni da arcano ogni secondo al personaggio finché resta nella runa e ne riduce le cure ricevute del 35%. L'effetto ignora le immunità e le rimozioni dei danni subiti. Quando la runa ha finito il proprio potere il personaggio riceve una propria BARRIERA NULLIFICATRICE, proporzionale alla quantità di tempo trascorso nella runa. Questa barriera Nullificatrice può assorbire 15.000.000 danni magici.
Per che cos'è questa barriera nullificatrice? assorbe tutti i danni magici che colpiscono la persona con quello scudo. Questo non significa che la persona ha ora più probabilità di sopravvivere, si deve applicare la barriera per la

cosa giusta.
Si deve prestare molta attenzione perché risulta LETALE all'ENERGIA TRABOCCANTE: l'energia arcana gocciola dalla pietra runica, infliggendo 1.500.000 danni da arcano ai nemici con cui entra in contatto. Se l'energia raggiunge il terreno, esplode, infliggendo 67.500 danni da arcano a tutti i nemici. L'effetto ignora le immunità e le riduzioni dei danni subiti.
Il membro del raid che ha la sua barriera nullificatrice ha il compito di assorbire più esplosioni possibili!! Man mano che la lotta va avanti serviranno altri membri con la barriera.
I dps ranged e gli healer devono fare attenzione al CAMPO DI SOPPRESSIONE: Ko'ragh colpisce il terreno sulla posizione di un personaggio, infliggendo 80.000 danni arcano in un'area di 8m. Inoltre, si crea un campo di soppressione dell'energia che silenzia tutti i personaggi e infligge 48.000 danni da arcano ogni secondo. L'effetto silenzia anche le Anomalie Instabili che se vengono fatte esplodere in questo campo non causano danno aoe.
Per tutto il combattimento il boss fa in sequenza delle espulsioni di magia.
- ESPULSIONE MAGIA: FUOCO. Ko'ragh espelle la magia del fuoco, infliggendo 15.000 danni da fuoco ogni secondo per 10 secondi a tutti i personaggi. Al suo termine infligge 80.000 danni da fuoco ai bersagli alleati entro 5m.
- ESPULSIONE MAGIA: ARCANO. Il boss travolge un personaggio con l'energia arcana corrotta, marchiando la sua posizione ogni 0,50s per 10 secondi. Dopo 1,5 secondi l'area marchiata esplode, infliggendo 200.000 danni da arcano a tutti i personaggi entro 5m. Inoltre, l'effetto aumenta i danni fisici subiti del 100%.
- ESPULSIONE MAGIA: GELO. Ko'ragh espelle un Globo Congelato che infligge 90.000 danni da gelo a tutti i personaggi. Il globo persiste per 20s e riduce la velocità di movimento di tutti i personaggi entro 30m di massimo 85%. L'effetto di rallentamento diminuisce all'aumentare della distanza tra i personaggi e il globo espulso.
- ESPULSIONE MAGIA: OMBRA. Il boss espelle la magia d'ombra, affliggendo tutti i pesonaggi con un effetto che assorbe fino a 140.000 cure ricevute. (ATTENZIONE CURATORI!).

RICORDA:

TeamLuxetTenebrä

I tank con ESPULSIONE MAGIA: ARCANO devono alontanarsi dai bersagli alleati ed evitare le esplosioni periodiche. Durante la fase di carica compaiono periodicamente delle Anomalie Instabili. Se vengono uccise dentro un CAMPO DI SOPPRESSIONE non possono lanciare DESTABILIZZAZIONE.
I dps devono assorbire ENERGIA CAUSTICA per ottenere una propria BARRIERA NULLIFICATRICE.
Devono evitare ENERGIA TRABOCCANTE fino a quando non hanno la barriera. Una volta ottenuta, la devono assorbire.
I curatori devono concentrare le cure sui personaggi che stanno assorbendo energia caustica, per permettere loro di sopravvivere alla trasformazione.
ESPULSIONE MAGIA: FUOCO. Infligge ingenti danni a tutto il gruppo d'istanza e deve essere dissolta.
ESPULSIONE MAGIA: OMBRA.Assorbe le cure fornite a tutti i personaggi finché non viene dissolta.

TeamLuxetTenebrä

Ko'ragh

Get ready for a complex shield/barrier/energy mechanic in this next one. Ko'ragh is the 2nd to last boss in this instance and really ups the mechanic difficulty.
First off, he can't be damaged by magical damage as he has a huge nullification barrier. You have to bring this barrier down and then he'll start to recharge it. Only then can you have someone absorb some of that energy and get a barrier of their own. They use that barrier to protect the raid from some orbs that come down and splash a bunch of aoe damage on the raid. Oh yeah and there are like 4 other main abilities the boss has that the raid has to respond to.
So boss has their shield barrier. You need to break that by doing magic damage to them. Ok, no big deal. As soon as the shield is broken, the boss will go to the center of the room and start channeling energy back onto himself. At that point, you can do full damage to the boss and he spawns some adds called Volatile Anomalies. These need to be picked up by the tank and we'll talk about them in a bit. But for now, you can have one raid member, usually a ranged dps hop into the channel of energy near the boss.
This will give that raid member CAUSTING ENERGY. They will take some arcane damage for every second they stay in there and also have a reduced healing debuff of 35%. So its harder to heal them. This damage and debuff can't be immuned by things like deterrence or pally bubbles. You can duck in and out of the caustic energy and it grants you a nullification barrier. The longer you absorb the energy during the phase, the bigger your shield. It would be recommended for healers to bomb this person with heals at least the first few times through.

So whats this big shield for? Well it absorbs all magical damage that hits

the person with that shield. While this means that person is now more likely to survive, you do need to apply the shield to the right thing. That thing is called OVERFLOWING ENERGY and its these orbs coming from the ceiling. Whenever they strike the ground, they will first off likely kill anyone without a shield being hit directly by it. But when they hit the ground, they do a big chunk of raid-wide aoe damage for each one that hits. More and more of these orbs will drop as the fight goes on.

So maybe you've put it together now but basically the raid member who has the shield needs to soak as many of these Overflowing Energy balls as possible. And you'll need to have more and more shielded raid members as the fight goes on coordinating who's taking which energy balls. Tf one hits, its not going to wipe you and in fact, you likely won't have anyone to soak the first couple of these balls coming down. But do your best.

Ok, so we've handled that mechanic hopefully. Now lets talk about the numerous other things going on. Ranged and heals needs to worry about SUPPRESSION FIELDS. The boss will charge out to them and smack the ground creating one of these void zones. If you are in it, you take some damage and are also silenced. Ah but check it, this suppression field actually helps you some. Remember those adds that spawned during the recharge phase. Those VOLATILE ANOMALIES will actually explode for some big aoe damage to the raid when they die UNLESS they die within a suppression field. Park them in there as they die and no damage. Moving on the rest of the mechanics are called "EXPEL MAGIC" spells. These are done in sequence by the boss throughout the entire fight unless of course he is recaharging. Expel Magic: Fire will put a small fire dot on the entire raid for 10 seconds. Once it expires, it will explode in a 5 yard radius for some big fire damage. The basic lesson is everyone needs to spread out when it expires of course. You can immune the application of the dot but can't immune the explosion at the end.

Next up is a tank mechanic called EXPEL MAGIC: ARCANE. This puts a weird effect on the tanks. It makes them rapidly drop little void zones that explode for huge damage a few seconds later to anyone within 5 yards of it. It also causes them to take 100% more physical damage. The latter part there is obviously to force a tank swap. But even more so, the

TeamLuxetTenebrä

little explodey void zones means that tank needs to get away from everyone so stay away as the tank runs and drops these void zones all over the place.
EXPEL MAGIC: FROST is the next one up. It drops an orb of frost that does a big chunk of aoe damage to the whole raid when it comes out and then slows anyone within 20 yards of it by 85%. As you get further away, the snare effect isn't as bad. Just get out of it quickly.
Lastly, EXPEL MAGIC: SHADOW hits all players with a very large heal absorption effect that prevents around 140k healing received. Healers need to get through that quickly so people don't take any additional damage and die.
Last thing to note before we head to strategy. For every 10 seconds that the boss has his barrier, he will get a stacking damage buff. Its only about 6% but it means you need to focus on that barrier so he doesn't slaughter the tanks. Now its time to address strategy. The first thing you should probably setup is who is going to take the shield barriers during the boss' frequent recharging phases.
Tanks obviously need to swap off for Expel Magic: Arcane. But also during the recharge, they need to pick up the volatile anomalies. Then they need to tank them in the suppression fields and melee dps can beat on them. Ranged dps should not be focused yet on killing the adds. They should be doing full damage to the boss because of the Recharge phase. Once Recharge is over, the whole raid should blast the adds and be back to handling the normal phase mechanics.

Positioning-wise, you should try to avoid being in the center for the most part. Especially when the boss' shield is about to be busted. Its also good to have the Frost orbs dropped on the outside. They are usually dropped on the tanks so just get ready to use a Roar or something to get out quickly. Lastly, healers should bust out healing throughput cooldowns to get through the Expel Magic: Shadow debuff.

REMEMBER:
Tanks, swap for Expel Magic: Arcane, run away with it, and then remember to tank the Anomalies in the suppression fields. Healers, heal hard through the Expel Magic: Shadow debuff and keep healing the Caustic Energy target while they get shielded. Dps, if you are supposed to get the nullification

shield, dip in and out and then soak up the Overwhelming Energy orbs quickly. Otherwise, just try to stay away from suppression fields and like the rest of the raid, explode your Expel Magic: Fire away from everyone else.
